                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            È
/clone_lib="Stanley Frontal SN pool 2"
/note="Organ: brain; Vector: pGR2.1-TOPO (Invitrogen);
Site_1: EcoN N; Total RNA (purified with Trizol and DNAsed
before use) was reverse transcribed using a modified
oligo-dT primer containing Real and HindIII sites.
Double- stranded cDNA was digested with Real, resulting in
blunt ended cDNA was split into two sets, one used as is as
the driver, the other set was split in half again and each
half linked to a different adaptor.
S'-TCAGGCGCCCCGGGCAGGT-3' or 5'-
AGGCGTGGTGCGCAGGGAGGT-3'), to be used as tester.
Subtraction was performed using the Clontech PCR Select
CDNA subtraction kit. Pool of two schizophrenics, male age
44 and female age 56 (S-116, S-118) subtracted by pool of
two mentally normal male individuals ages 41 and 53
(S-124, S-141). Tissues were obtained from the Stanley
Neuropathology Consortium (www.stanleylab.org). Library
constructed and subtracted by Dr. Nancy Johnston [(410)
614-3918, nlj@welchlink.welch.jhu.edu]."

Funding for cattle EST sequencing was provided by the USDA National
Febearch Initiative, Animal Genome Resource Grant AG 99-3205-8534
to H. A. Lewin and J. E. Womack. Base Calling/Quality Scores: PHRED
from Washington University Genome Center. Vector Trimmi g:
Cross match from Washington University Genome Center PHRAP suite.
Phis sequence is vector free and at least 200 bp in length.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EST 22-JAN-2004

/note="Organ: brain, Vector: pCR2.1-TOPO (Invitrogen);
Site_1: ECORI; Total RNA (purified with Trizol and DNAsed before use) was reverse transcribed using a modified oligo-dT primer containing Rsal and HindIII sites.
Double- stranded cDNA was digested with Rsal, resulting in blunt ended cDNA of an average 0.1-2 kb in length.
Digested cDNA was split into two sets, one used as is set the driver, the other set was split in half again and each half linked to a different adaptor
(5'-TCGAGCGCGCCGCGCGT-3'), to be used as tester.
Subtraction was performed using the Clontech PCR Select cDNA authraction Kit. Pool of two schizophrenics, male age two mentally normal male individuals ages 41 and 53 (S-116, S-118) subtracted by pool of two mentally normal male individuals ages 41 and 53 (S-124, S-141). Tissues were obtained from the Stanley constructed and subtracted by Dr. Nancy Johnston [(410) 614-3918, nlj@welchlink.welch.jhu.edu]."

Pool of two schizophrenics, male age 44 and female age 56 (S-116, S-118) subtracted by pool of two mentally normal male individuals ages 41 and 53 (S-124, S-141). Tissues were obtained from the Stanley Neuropathology Consortium (www.stanleylab.org). Library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

GENERAL INFORMATION:

APPLICANT: Zhang, Jimmy

APPLICANT: Endeq, Wilson O.

APPLICANT: Endeq, Wilson O.

APPLICANT: Ford, Donna M.

APPLICANT: Schlegel, Wilson O.

APPLICANT: Schlegel, Wilson O.

APPLICANT: Schlegel, Wilson O.

TITLE OF INVENTION: GENES AND GENE EXPRESSION PRODUCTS THAT

TITLE OF INVENTION: GENES AND GENE EXPRESSION PRODUCTS THAT

TITLE OF INVENTION: AEE DIFFERENTIALLY REGULATED IN PROSTATE CANCER

TITLE REFERENCE: 1532.002/200130.463

TITLE OF SEQ ID NOS: 341

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 111

EMBORTH: 468

TUDE OF INVENTION: ARE BEREAUTH AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND GENES AND G

APPLICANT: Steinmann, Kathleen E.
TITLE OF INVENTION: GENES AND GENE EXPRESSION PRODUCTS THAT
TITLE OF INVENTION: ARE DIFFERENTIALLY REGULATED IN PROSIATE CANCER
FILE REFRENCE: 1532.002/200130.463
CURRENT APPLICATION NUMBER: US/09/328,475C
CURRENT FILING DATE: 1999-06-09
NUMBER OF SEQ ID NOS: 341
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 277
LENGTH: 724

Sequence 276, Application US/09328475C

Sequence 276, Application US/09328475C

Patent No. 6476207

GENERAL INFORMATION:

APPLICANT: Astel, Jon H.

APPLICANT: Astel, Jon H.

APPLICANT: Garroll III, Eddie

APPLICANT: Garroll III, Eddie

APPLICANT: Bridge, Wilson O.

APPLICANT: Monahan, Oblu E.

APPLICANT: Monahan, Oblu E.

APPLICANT: Steinmann, Kathleen E.

APPLICANT: Steinmann, Kathleen E.

TITLE OF INVENTION: GRABE SAND GENE EXPRESSION PRODUCTS THAT

TITLE OF INVENTION: ARE DIFFERENTALLY REGULATED IN PROSTATE CANCER

TITLE OF INVENTION : ARE DIFFERENTALLY REGULATED IN PROSTATE

CURRENT PELING DATE: 1999-06-09

NUMBER OF SEQ ID NOS: 341

SEQ ID NO 276

SEQ ID NO 276

LENGTH: 744
GENERAL INFORMATION:

APPLICANT: Zhang, Jimmy
APPLICANT: Zhang, Jimmy
APPLICANT: Carroll III, Eddie
APPLICANT: Carroll III, Eddie
APPLICANT: Budege, Wilson O.
APPLICANT: Bradege, Wilson O.
APPLICANT: Schlegel, Robert
APPLICANT: Schlegel, Robert
APPLICANT: Steinmann, Kathleen E.
TITLE OF INVENTION: GENER AND GENE EXPRESSION PRODUCTS THAT
TITLE OF INVENTION: ARE DIFFERENTIALLY REGULATED IN PROSTATE CANCER;
FILE REFERENCE: 1532.002/200130.463
CURRENT APPLICATION NUMBER: US/09/328,475C
CURRENT APPLICATION NUMBER: US/09/328,475C
CURRENT APPLICATION NUMBER: US/09/328,475C
CURRENT APPLICATION NUMBER: US/09/328,475C
CURRENT APPLICATION NOWER: 1999-06-09
KUMBER OF SEQ ID NOS: 341
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 330
LENGTH: 741
TYPE: DNA
CORGANISM: HOMO Sapien
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1.3%; Score 23; DB 3; Length 741;

Sequence 268, Application US/09280116A
Patent No. 6331427
GENERAL INFORMATION:
APPLICANT: Robison, Keith E.
TITLE OF INVENTION: Nucleic Acid Molecules Encoding Human Protease Homologs
FILE REFERENCE: 5800-24, 035800/176965
CURRENT APPLICATION NUMBER: US/09/280,116A
CURRENT FILING DATE: 1999-03-26
NUMBER OF SEQ ID NOS: 268
SOFTWARE: PatentIn Ver. 2.0
SSOFTWARE: PatentIn Ver. 2.0
SSOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           APPLICANT: Endege, Wilson O.

Sequence 194, Application US/09328475C

Patent No. 6476207

GENERAL INPORMATION:

APPLICANT: Zhang, Jummy

APPLICANT: Astel, Jon H.

APPLICANT: Endege, Wilson O.

APPLICANT: Endege, Wilson O.

APPLICANT: Schlegel, Robert

APPLICANT: Schlegel, Robert

TITLE OF INVENTION: GENES AND GENE EXPRESSION PRODUCTS THAT

TITLE OF INVENTION: GENES AND GENE EXPRESSION PROSTATE CANCER

TITLE REFERENCE: 1532.002/200130.4638

CURRENT APPLICATION NUMBER: 183(99/328,475C)

CURRENT FILING DATE: 1999-06-09

NUMBER OF SEQ ID NOS: 341

SEQ ID NO 194

SEQ ID NO 194

LENGTH: 502

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FEATURE:
```

g

```
Sequence 176, Application US/09328475C

Sequence 176, Application US/09328475C

Patent No. 64762D1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Astel, Jon H.
APPLICANT: Carroll III, Eddie
APPLICANT: Bendey, Wilson O.
APPLICANT: Bord, Donna M.
APPLICANT: Schlegel, Wobert
APPLICANT: Schlegel, Robert

TITLE OF INVENTION: GENES AND GENE EXPRESSION PRODUCTS THAT
TITLE OF INVENTION: ARE DIFFERENTIALLY REGULATED IN PROSTATE
TITLE OF INVENTION ARE DIFFERENTIALLY REGULATED IN PROSTATE
TITLE REFERENCE: 1532.002/20013/0.463
CURRENT APPLICATION NUMBER: US/09/328, 475C
CURRENT PILING DATE: 1999-06-09
NUMBER OF SEQ ID NOS: 341

SEQ ID NO 176

LENGTH: 773
